PROJECTS

- **Todo Task Manager (Reactjs and Nodejs)**

It is todo task manager web-based application to manage our daily tasks easily. This project is based on Nodejs APIs along with Reactjs.

- **Weather Application (Reactjs)**

It is a weather application to check weather of any country and then any city. I have used Openweather APIs to fetch data of weather.

- **Online Shopping Site (JavaScript)**

This website is to order product online. User can visit the site check the products and add to cart. However to buy or open the cart user have to login first.

- **Activity Tracker (PHP)**

It is about to track the daily routine work. To add activity user have to login first and he/she can create new account also. Then add the activities with different categories (cooking, playing, etc.)

- **Tic Tac Toe (JAVA)**

It's a small project where we have to make a game Tic Tac Toe and keep record of winning players X or Y.

- **Shopping Cart (Android)**

This project is to create mobile app. User need to login before cart products. User can add to cart increase or decrease the quantity of products also see the product on cart list and place order.
